

NORMA – Access control and Time & attendance from Primion

Primion systems in the new administration
and logistics center in Sarrebourg, France

NORMA decides on access control and time recording

Primion systems in the new administration and logistics center in Sarrebourg, France, for 500 employees ensure effective processes

The ability to integrate third-party systems, fast response times in pre-sales support, a customised global solution and geographical proximity to the customer led to Primion winning the contract to equip NORMA's new state-of-the-art administration and logistics centre in Sarrebourg. The building complex was built in a record time of just under 14 months and replaces the founding branch in Strasbourg.

Dimitri Corrado, Deputy Director of Information Systems:

“Primion demonstrated exceptional professionalism throughout the installation. Since then, their quality of service in terms of maintenance, responsiveness and technical support has been nothing short of outstanding.”

Quality and performance are convincing

NORMA is a well-known German discounter. The new headquarters in Sarrebourg, France, has over 4,000 square meters of office space and 22,000 square meters of storage space on four floors, as well as a new logistics platform to supply up to 200 branches in France. The overall Primion project included the installation of the solutions for access control, time recording, video surveillance as well as the alarm and intercom solution.

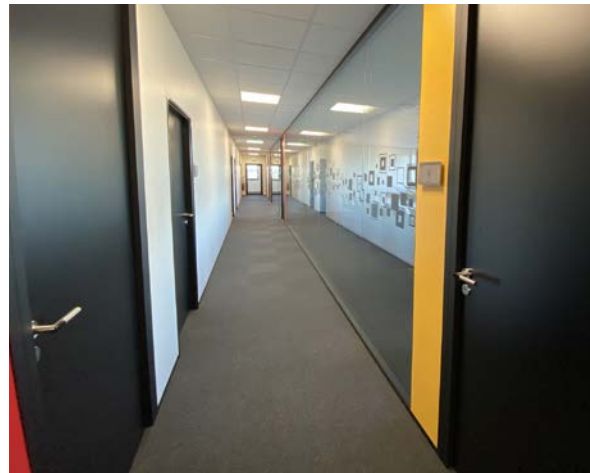

Adjust daily rights

Around 500 employees and their rights for 139 doors are managed in the prime WebAccess software for access control. Offline readers were also installed for offices and meeting rooms, whose access rights can be adjusted on a daily basis. 88 electronic cabinet locks will be installed in the changing rooms.

The use of time recording systems has no notable history in France. However, NORMA wanted a global solution and at the same time only one provider. Primion offered the prime Time software for managing employees in the warehouse, who record their working hours via two ADT 1100 terminals.

Security through building automation

The digital recorder system allows images to be recorded 24 hours a day for 30 days. In addition, 35 state-of-the-art cameras with a 360-degree panorama to control the storage of goods at the loading ramps and a 180-degree panorama to control all traffic flows on the site were integrated. The new control centre is also alarm-protected with a central unit that monitors 80 alarm points in the offices and warehouses and sends information about technical malfunctions in the building to the remote monitoring (cold management, fire, heating, air management). Employees without badge use one of the 13 IP intercom stations with video and call buttons.

Dimitri Corrado:

“I am particularly pleased with the software functionality of these systems as they are easy to use and have provided accurate and reliable information. Furthermore, their robustness is also remarkable as they can withstand intensive daily use.”
